

Time-ordered localized defensive reorganization

Panel A: deterministic heldout Metrica Game 2 anchor at 2336.04 s (earliest eligible anchor at or above the upper quartile of preceding attacker path; selection uses attacker movement only).

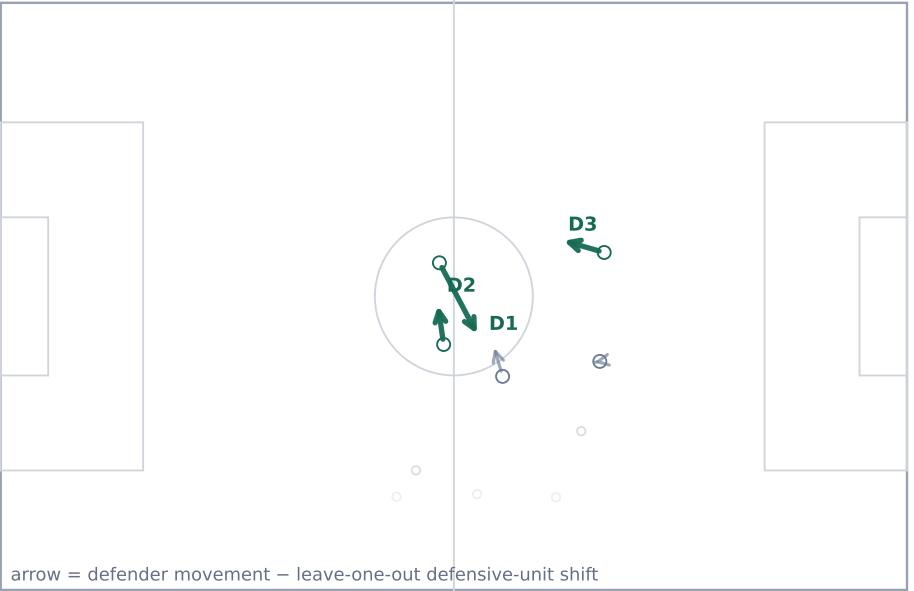

A1 Exposure: preceding attacker movement

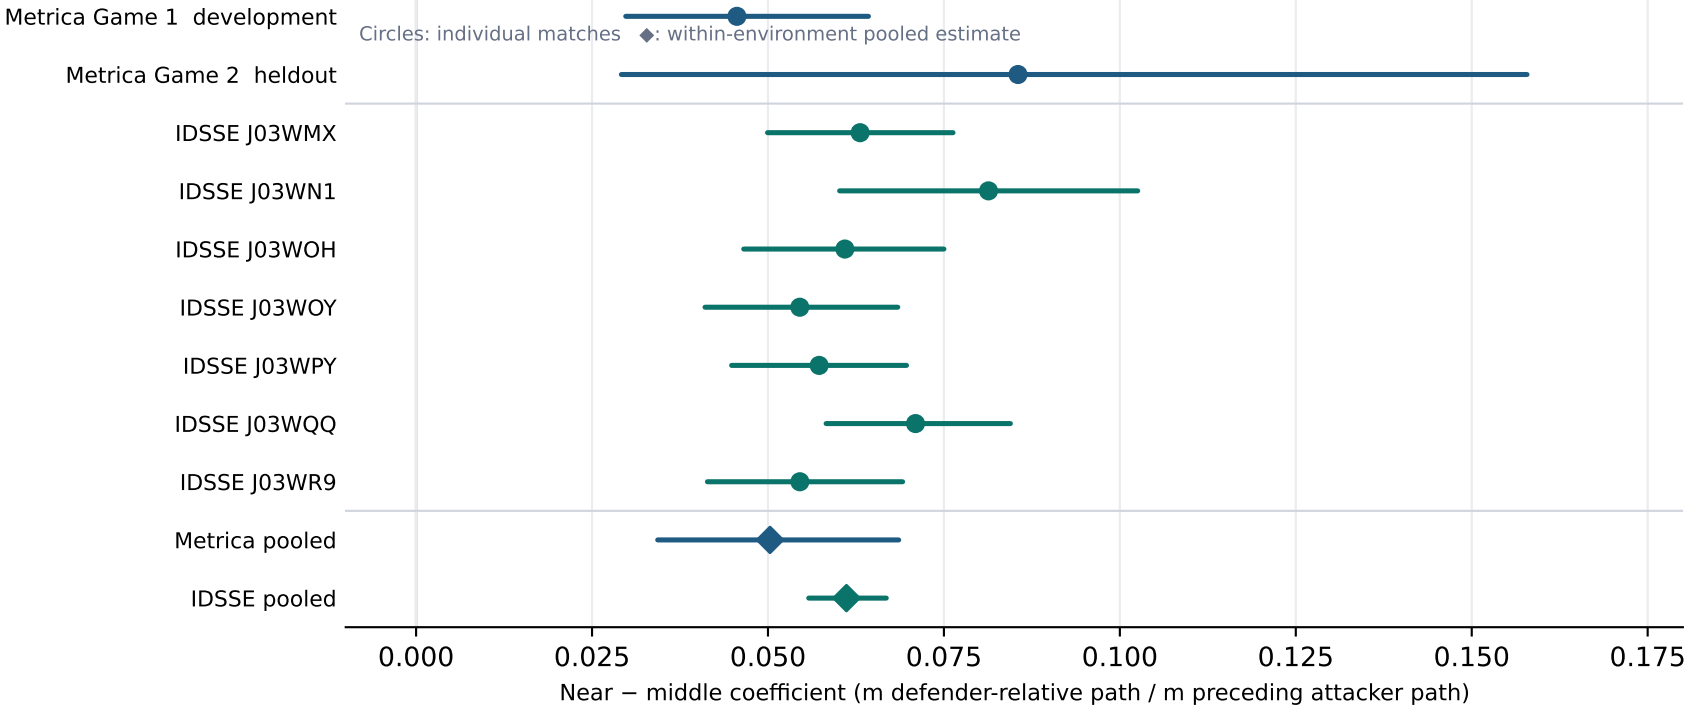

A2 Next 2 s: absolute defender movement

A3 Same movement relative to the defensive unit

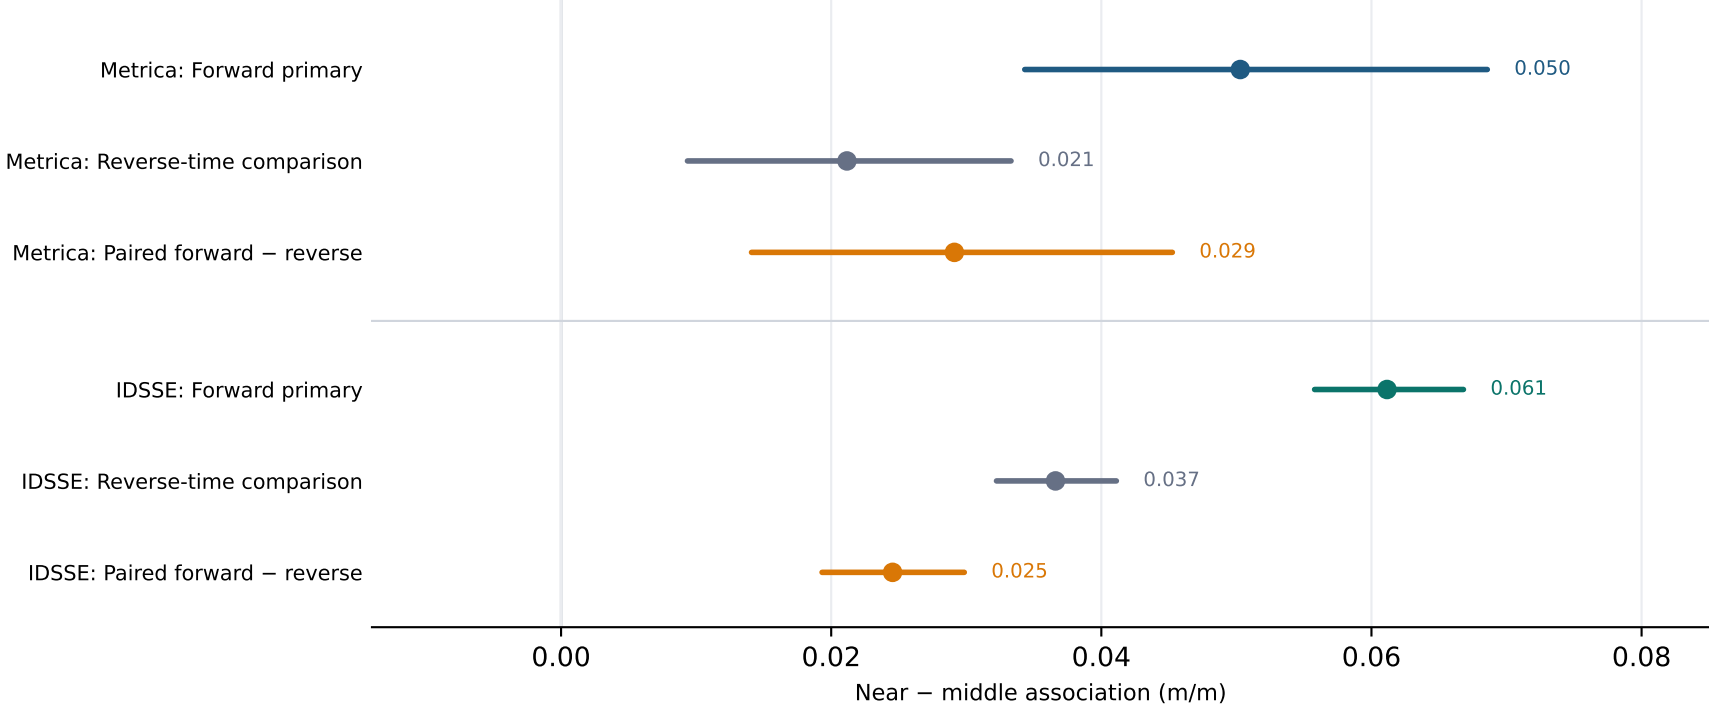

B The localized association replicates across matches

Metrica intervals: 97.5%; IDSSE intervals: 95%. Pools are shown separately, not as a nine-match meta-analysis.

C Forward association exceeds reverse time

Reverse-time structure remains positive. The evidence is paired forward – reverse excess, not a reverse-time null.

Replicated: localized, time-ordered defensive reorganization.   Not established: causation, tactical meaning, opportunity, or value.
